Core Experiments of Chemistry Practical Class 11 2013

The practical syllabus for class 11 chemistry, particularly in 2013, encompasses a variety of experiments that are fundamental to inorganic, organic, and physical chemistry. Below, we explore these experiments in detail, highlighting their objectives, procedures, and educational significance.

Titration of a Strong Acid with a Strong Base

Objective: To determine the concentration of a given hydrochloric acid (HCl) solution by titration with a standardized sodium hydroxide (NaOH) solution.

Apparatus and Chemicals: Burette, Pipette and pipette stand, Conical flask, Beaker, HCl solution (unknown concentration), NaOH solution (standard solution), Phenolphthalein indicator.

Procedure: Rinse the burette with NaOH solution and fill it, ensuring no air bubbles are present. Pipette a fixed volume (say 25 mL) of HCl into the conical flask. Add 2-3 drops of phenolphthalein indicator to the acid solution. Titrate with NaOH from the burette until a faint pink color persists, indicating neutralization. Record the volume of NaOH used. Repeat the titration to obtain consistent readings.

Calculation: Using the titration data, apply the formula: $C_1V_1 = C_2V_2$ where (C_1) and (V_1) are the concentration and volume of the acid, and (C_2) and (V_2) are those of the base.

Pedagogical Significance: This experiment ingrains the concept of molarity, stoichiometry, and titration techniques. It emphasizes accuracy, precision, and systematic approach—skills vital for any chemical analysis.

Preparation and Identification of a Salt

Objective: To prepare sodium chloride (NaCl) from sodium carbonate and hydrochloric acid, and to confirm the identity of the salt via physical and chemical tests.

Procedure: Dissolve sodium carbonate in water. Add dilute hydrochloric acid gradually until effervescence ceases. Filter the solution to remove impurities. Evaporate the filtrate to crystallize NaCl. Test the crystals using solubility and flame tests.

Significance: This practical demonstrates double displacement reactions, crystallization techniques, and qualitative analysis, reinforcing concepts of chemical reactions and salt preparation.

Determination of the Water of Crystallization in a Salt

Objective: To determine the percentage of water of crystallization in hydrated copper sulfate ($\text{CuSO}_4 \cdot x\text{H}_2\text{O}$).

Apparatus and Chemicals: Crucible and lid, Bunsen burner, Analytical balance, Hydrated copper sulfate.

crystals Procedure: Weigh a small amount of hydrated $\text{CuSO}_4 \cdot x\text{H}_2\text{O}$. Heat the sample in a crucible until the water is driven off, indicated by a color change from blue to white. Allow to cool in a desiccator and reweigh. Calculate the percentage of water lost. Calculation: $\text{Water of crystallization (\%)} = \frac{\text{Mass of water lost}}{\text{Original mass of hydrate}} \times 100$ Educational Value: This experiment elucidates concepts of stoichiometry, molar mass, and the structure of crystalline salts. It also introduces students to dehydration and thermal stability of hydrates.

Organic Compound Identification via Functional Group Tests Objective: To identify the presence of specific functional groups in organic compounds such as alcohols, aldehydes, or carboxylic acids. Typical Tests: Test for Aldehydes: Fehling's solution (blue) reacts to produce a brick-red precipitate. Test for Alcohols: Reaction with sodium metal produces hydrogen gas. Test for Carboxylic Acids: Effervescence with carbonate salts, or pH test showing acidity. Significance: These qualitative tests hone students' ability to recognize organic functional groups, essential for understanding organic synthesis, reactions, and mechanisms.

Preparation of a Sample Organic Compound Objective: To synthesize an organic compound such as acetanilide or urea via simple laboratory procedures. Procedure: For example, preparing acetanilide involves acetylation of aniline using acetic anhydride. The process demonstrates concepts of nucleophilic substitution and acylation. Importance: This practical introduces students to organic synthesis, purification techniques like recrystallization, and the importance of reaction conditions.
